EXPERIENCE

viaPeople, Inc., NYC — *Staff Software Engineer*

July 2025 - PRESENT

Lead greenfield development of performance evaluation software intended to replace 23 year old legacy application, with heavy emphasis on role based access and modern API integrations. Overhauled the CI/CD pipeline. Deeply involved in the Product Discovery and Refinement process.

Nursa, Inc., Utah — *Senior Software Engineer*

October 2023 - July 2025

Implemented automated database archiving for notification service using partitioning and node streams to offload data to Google Cloud Storage. Refactored the entire marketplace pricing engine, making it possible for regional account managers to finetune job visibility for their markets, as well as implementing best practices in black box pricing (akin to Uber).

GuideCX, Utah — *Senior Software Engineer/Team Lead*

October 2020 - October 2023

Generally supported the core Ruby/Rails legacy monolith. Helped create a front end component library in React that achieved widespread adoption across the dev force. Rebuilt the authentication engine in nodejs/express with GraphQL. Lead teams in both Scrum and Kanban workflows. Worked closely with Product to refine requirements and build implementation plans.

FamilySearch, Utah — *Software Engineer*

May 2018 - October 2020

Supported the orchestration REST API for Android/iOS mobile apps
